

## Azure VMware Solution Triage

What is our threshold for engaging FastTrack for Azure - node count? Starting node count for "normal projects"

☐ Sean - average node count for AMER projects Exceptions

- Public Sector
- Regulatory compliance

Region	Exceptions
AMER	US Gov Cloud
AMER	Regulatory compliance requirements
EMEA	Public Sector
EMEA	Regulatory compliance requirements
EMEA	Node Count of 10 or more
ASEA	TBC

## General Scoping questions

Question	Context / More information
1. What language does the customer speak?	FastTrack for Azure is provided in English, other languages only by SLT exception.
2. Does the customer have Azure Cloud Experience?	Gather high-level information around the experience and qualifications if any in the organization.
3. When does customer want to start moving workloads?	
4. Required FastTrack for Azure start and end dates?	
5. What is the main business driver for this project?	Data Centre evacuation, DR, HA .....
6. Is there any design documentation that can be shared already?	High Level Design / Low Level Design / Reference Architecture?

## Azure VMware Solution

Region	Minimum Node Count
AMER	6
EMEA	10
ASEA	TBC

☐ ASEA node count = N/A

## Triage-Questions

Question	Context / More information
1. Has an Azure VMware Solution business case been completed and accepted?	1. No → We need to be careful about introducing FastTrack for Azure too early in the process and getting in "sales/pricing" mode. This is NOT our function. 2. Yes → Ensure all aspects of the business case are in <b>PRODUCTION</b> scope. <b>NO PREVIEW TECHNOLOGIES.</b>
2. Is there a dedicated Project Team for the Azure VMware Solution project?	Good to document this, allows easier contact / communication with all key stakeholders and shows customer commitment.
3. Have you completed or are you in the process of completing your quota request?	Quota assignment is needed as part of the Azure VMware Solution process and deployments cannot be completed without this step being completed
4. Have you completed a PoC / Pilot with Azure VMware Solution?	Please note down any people or teams involved in this PoC/Pilot
5. Does the customer have an existing Azure presence?	1. No → Landing Zone design ASSISTANCE needed (FastTrack for Azure will NOT design but ASSIST with design) 2. Yes → see next point(6)
6. Will the Azure VMware Solution deployment make use of the existing Azure presence?	1. Yes → Based on Landing Zone principles? 2. No → New Landing Zone
7. Which region(s) is the customer looking to use?	This is important for understanding capacity and/or other constraints. If customer is looking to use a region other than the one closest to them ask why.
8. What approach to resiliency are you taking with Azure VMware Solution?	Looking for ideas like HA, Backup, DR, Stretched clusters, multi-region, any aspects that can add more complexity.
9. Has a networking pattern been decided upon?	THis is a key aspect with regards to the complexity of the project and how done the journey the customer actually is. Options, VPN, ExpressRoute, HCX network extensions. 3rd party NVA or Network Architecture references patterns - <a href="#">Example architectures for Azure VMware Solutions</a> or
10. Has an workload assessment been completed?	1. Azure Migrate Assessment (Azure Native) OR 2. RVTools (VMware Native) PM to get these results and attach to Ceres project
11. What is your expected migration approach?	1. HCX 2. 3rd party 3. Are you looking at making use of Layer 2 Extension technology? (Keeping same IP addresses on-premises and in Azure VMware Solution) 4. Use of MON considered?

## Triage-Questions

Question	Context / More information
12. Do you know the expected SKU type?	Very important for capacity constraints. Not all SKUs are available in all regions - <a href="#">Azure VMware Solution SKU by region</a> - !! SKU availability does NOT mean that there is capacity for the customer to deploy !!
13. What is expected deployment node count?	Request main technical consideration driving the node count
14. Does the customer have experience with Azure VMware Solution?	VMware experience does NOT mean AZURE VMware Solution - these are FUNCTIONALLY the same but not identical in deployment.
15. Is a Partner involved with Azure VMware Solution experience?	Request main partner name and contact information
16. Any focus areas or specific technical asks for FastTrack for Azure?	Some examples: Networking set up Express Route, VPN, vWAN, Routing (BGP), Monitoring, Automation, (Azure) Back Up & DR, Security (Firewalls, ARC, Defender for Cloud, etc.) Alignment with VMware team (NSX-T / NSX Edge set up / HCX / SRM for DR)

## General constraints and considerations

Constraint / Consideration	Leading questions
Azure VMware Solution requires VMW 6.0 or later to be deployed on-premises	What version of VMware are you using on-premises?
Customer is responsible for maintaining workloads on Azure VMware Solution, only the fabric / service is maintained by Microsoft	Who is currently managing and operating the on-premises VMware environment?
VMware might need to be involved with Azure VMware Solution projects depending on locally deployed technologies	What VMware technologies are you using within your existing VMware environment
NSX-T is the default and currently only supported networking technology	Are you currently using vLANS, V-Standard or V-Distributed switches or have you already made the switch NSX-T?
